

ISAT Performance by Ethnicity Over Time

This ISAT report shows the percent of students per score group over three years by subject for currently enrolled students, one ethnicity at a time.

Getting to the Report

On the KPI Dashboard (Account home page), click **Details** in one of the ISAT KPIs. Click the report title.

Interpreting the Report

To make comparison easier, this report displays percent per score group instead of number of students.

- This report shows currently enrolled students who have at least one year of test data.
- In this screen shot, Hispanic/Latino students are selected.
- Of the currently enrolled Hispanic/Latino students in the State, there are around 9,200 with results for at least one year in the subjects of Math, Reading and Language. Total Unique refers to the total number of students with results: many students are represented in each of the three test years.
- For Science, results are only available for the most recent year. The reason Total Unique is lower, however, is because this subject is not tested in as many grade levels.

Points for Discussion

- Viewing the Hispanic/Latino students:
 - What else does the data tell us?
 - Add together Advanced and Proficient students for each year and subject. In which subject(s) did the percent of Hispanic/Latino students who were **at least** proficient increase each year?
 - How do you think curriculum, special programs, etc. in place over the last few years have impacted the numbers you see?
- Using the drop-down, switch the ethnicity displayed.
 - Do you see similar patterns?
 - Is the gap in science performance similar?
- Use the Batch Create PDF Files link to create a printable file that contains one report view per ethnicity to facilitate side-by-side comparison.
- If you are a district or school level user, choose a subject and click the Below Basic group for the most recent test year. Discuss what supports can be provided for these students.
